AQUA-BUFF®

COMPOUND & POLISH

A QUALITY Hawkeye Industries PRODUCT

Aqua-Buff® products remove scratches plus cleaning and polishing a variety of surfaces.

Three products are currently available from Hawkeye Industries:

- Aqua-Buff® 1000-F Fast-Cut Compound
- Aqua-Buff® 1000-W Fast Cut Compound
- Aqua-Buff® 2000 Compound and Polish

Why Aqua-Buff®?

Aqua-Buff® products are valued for their outstanding performance, environmental friendliness, economy and ease of use.

- Aqua-Buff contains only animal tallows and fillers —there are no oils or polymers. Thus, the surface you see is the true surface.
- Aqua-Buff® products cause no harm to the environment. When you apply Aqua-Buff® you will find that the product totally ablates, which means the polishing fillers break down and disappear.
- A little bit of Aqua-Buff® goes a long way. Most users find that they use half as much Aqua-Buff® compared to other compounds.

Application

For best results, use machine buffers that generate at least 2500 rpm for Aqua-Buff® products.

Aqua-Buff® 1000 or 2000 — dab the product on the surface with a brush or cloth, a small area at a time, and mist the surface with water. You will want to apply only half the amount normally used for other compounds, about a coin-sized dab per square foot. Immediately machine buff with a clean, damp compound pad. Use wool or wool/blend pads.

Which Product to Recommend

Aqua-Buff® 1000-F or Aqua-Buff® 1000-W — These are similar products. They are used to take out scratches from, and to clean, gelcoated and painted surfaces, such as patterns, plugs, molds, and finished products.

- 1000-F is off white and is better for polishing white gelcoat. 1000-F works a bit faster than 1000-W. 1000-W is blue-green, and is easier to see on some surfaces.
- Both compounds remove 320- to 600-grit scratches, depending on the hardness of the surface.
- Aqua-Buff® 1000-W and Aqua-Buff® 1000-F give a high sheen to black and dark colored pigments, as well as to cultured marble and other solid surface materials.

Aqua-Buff® 2000 — this product is a polishing compound, which takes out fine scratches (1000-grit or higher) and swirl marks. It is used whenever a high-gloss finish is desired.

Additional Information
